## SYMON FOR VERITAS

SYMON Monitoring Plugins for VERITAS integrate

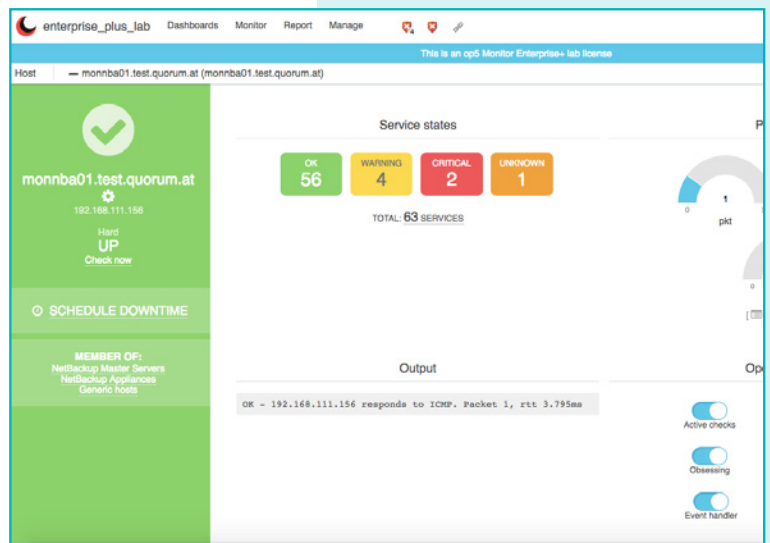

- NetBackup appliances
- NetBackup software

into your Nagios based monitoring.

The SYMON Monitoring Plugins for Veritas NetBackup software and appliances consists of various checks for different components of the system. Some checks use a collector option where initially only the data required is collected and later can be analyzed in various options. This has been implemented to reduce the overhead with collection the same information over and over again and to minimize monitoring impact on NetBackup and the monitoring environment.

Our plugins are continuously refined, improved and supplemented with new features. Consequently, you will always work with the most up-to-date product and you can rely safely on your monitoring.

## EXAMPLE

## CHECK EXAMPLES

NETBACKUP CHECKS	NETBACKUP APPLIANCE CHECKS
SSH Status	Appliance load
Catalog backup status for Client	Volumes, partitions, disks
Client backup status	Deduplication space reduction
EMM database status	Power supply
Tape status, Job status, Policy status	PCI Slots, HBAs, NIC
Retention levels	Fans
Licence	CPU, RAID, IPS
MSDP pool	Memory
SLP images	Interfaces
Storage server status	CallHome, SSH status

SYSTEM MONITORING

## DATA SHEET

## WHY SYMON?

- » integrated view of all systems
- » freely definable level of detail
- » individual adaptations possible
- » scalable solutions for any enterprise
- » further processing of data on an individual basis (trending, reporting, history, visualisation)
- » integration into different monitoring platforms

OP5

Nagios Core

ICINGA

Nagios XI

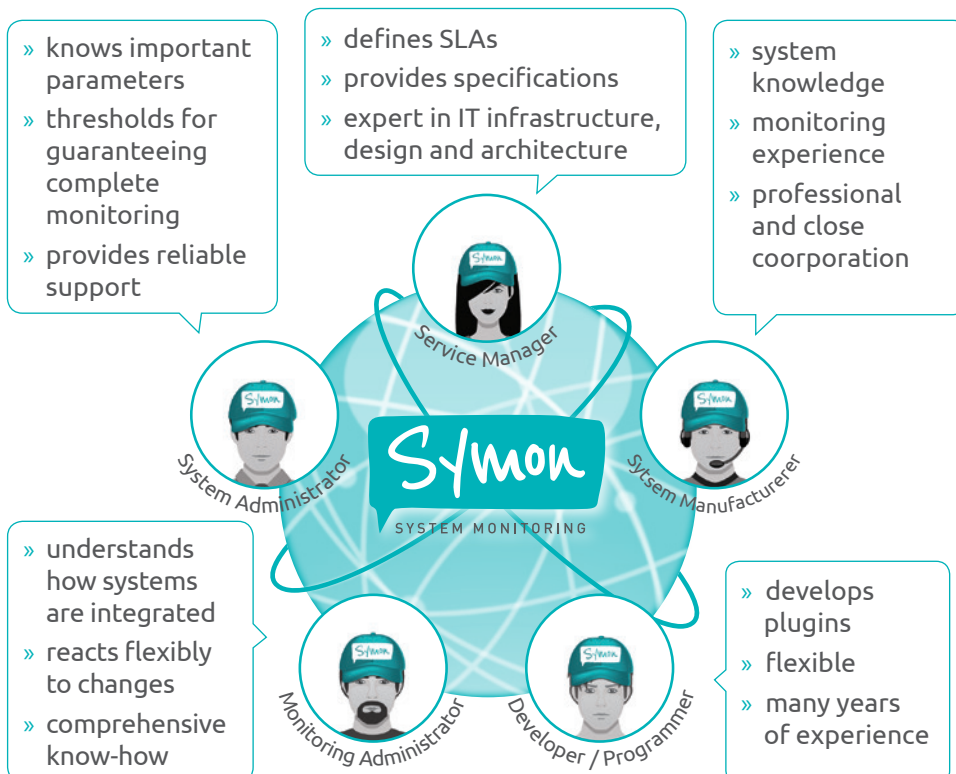

open IT COCKPIT

WATCHBOX

## SUPPORTED MONITORING SYSTEMS

- » OP5
- » Nagios Core
- » Nagios XI
- » MK check
- » Open IT Cockpit
- » Icinga
- » Watchbox

## COMBINED MONITORING EXPERTISE

## SUBSCRIPTION

- » 1 subscription for complete environment
- » Vendor aligned tiering model
- » Only the highest tier level is licensed
- » Flexible tier upgrades
